

FinTrust Week 2 Documentation (Deliverable 6)

This document provides the final Week 2 project documentation for the FinTrust Data Analytics assignment, summarizing the project workflow, cleaned data workbooks, Power BI executive dashboard, and business findings.

1. Project Overview & Objectives

The FinTrust Week 2 project evaluates 1,500 customer records and 12,000 transaction records totaling over 560M NGN in volume. The primary objective is to transition raw banking data into actionable business intelligence through structured data cleaning, Power BI executive dashboarding, and business findings reporting.

2. Submitted Project Deliverables Checklist

- 1. Data Quality & Cleaning Workbooks: Detailed Excel documentation covering data profiling, missing value treatment, anomaly detection, and duplicate removal (FinTrust_Customer_Data_Cleaned.xlsx & FinTrust_Transaction_Data_Cleaned.xlsx).
- 2. Power BI Executive Dashboard: Interactive executive dashboard featuring KPI cards, transaction status breakdowns, risk status proportions, and channel trends (FinTrust_Executive_Dashboard.pbix).
- 3. Business Findings Report: Structured findings following the Finding → Evidence → Business Meaning format (FinTrust_Week2_Business_Findings.pdf).
- 4. Week 2 Documentation: Comprehensive workflow summary and project report (FinTrust_Week2_Documentation.pdf).

3. Technical Methodology & Validation

All data transformations and metric aggregations were rigorously cross-verified against underlying records to maintain absolute financial and operational accuracy. Key insights focus on mobile and POS channel dominance, operational success rates, and customer segmentation liquidity drivers.

4. Conclusion & Strategic Next Steps

The findings provide actionable guidance for FinTrust leadership: secure core mobile app infrastructure to safeguard transaction volume, investigate minor payment gateway drops, and target everyday retail customers with tailored loyalty initiatives.
